

1000 Company Scale-Up Proposal

Objective

The objective of this proposal is to build a scalable and evidence-driven pipeline to identify 1000 ICP-qualified manufacturing companies within one month aligned with DeepThought's "Federer" company profile.

The focus is on:

- Quality over quantity
- Evidence-backed qualification
- Structured filtering
- Operational scalability

Overall Strategy

The sourcing system is designed as a structured funnel:

Source , Build Initial List, Screen & Filter, Deep Evaluation, Final ICP List

The process combines AI-assisted research, manual verification, structured qualification, and continuous quality control.

Step 1 — Source Companies

Primary sources used:

- Industry directories (IndiaMART, NIC, FICCI, EEPC, Pharmexcil)
- Government and regulatory portals (MSME, DPIIT, BIS, DSIR, Startup India)
- Business databases (Tracxn, Tofler, ZaubaCorp, Crunchbase)
- LinkedIn search
- Company websites
- Events and industry associations
- Referrals and network research

These sources help identify technically differentiated, manufacturing-focused companies with visible operational activity.

Step 2 — Build Initial Company List

Expected raw universe:

- Approximately 4000–6000 companies

Initial cleanup process:

- Remove duplicates
- Remove traders/distributors
- Remove non-manufacturing firms

Basic qualification filters:

- India-based operations
- Active operational presence
- Functional website

Expected shortlist after filtering:

- Approximately 1500–2000 companies

Step 3 — Screen & Filter

AI-assisted research tools such as ChatGPT and Claude would be used for:

- Summarization
- Idea generation
- Structured data extraction

Key information collected:

- Products/services
- Founder information
- Revenue signals
- Certifications
- Locations
- Hiring/expansion activity

Pre-screen filters focus primarily on:

- C1 — Manufacturer
- C2 — India-based
- C3 — Differentiated products

Expected shortlist:

- Approximately 400–500 companies

Step 4 — Deep Evaluation

Each shortlisted company would be manually evaluated using the Federer framework:

- C1 — Manufacturer
- C2 — India-based operations
- C3 — Differentiated products
- C4 — Technical founder/leadership

- C5 — Growing sector
- C6 — Growth signals

Evidence would be collected for:

- Manufacturing capability
- Founder background
- Certifications
- Expansion activity
- Export signals
- Operational growth

Final company classification:

- Strong Fit
- Borderline
- Weak Fit

Step 5 — Final ICP-Qualified List

The final output would contain approximately 1000 ICP-qualified companies ready for:

- Outreach
- Pipeline generation
- Sales qualification

1-Month Execution Roadmap

Week 1 — Build Pipeline

- Finalize sourcing channels
- Collect raw company data
- Build master database
- Remove duplicates

Week 2 — Screen & Filter

- Apply qualification filters
- AI-assisted research
- Pre-screening
- Generate shortlist

Week 3 — Deep Evaluation

- Manual verification
- C1–C6 scoring
- Evidence collection
- Company qualification

Week 4 — Quality & Preparation

- Final quality control
- Missing data enrichment
- Outreach hook preparation
- Final formatting

Tools Used

- Gemini / Claude — research assistance and summaries
- LinkedIn — founder research and hiring signals
- Company websites — products, plants, certifications
- Tracxn / Tofler — revenue and ownership
- Google search operators — deep company discovery
- Google Sheets / Excel — database management and scoring

Quality Control Process

Quality control remains active throughout the project.

QC measures include:

- Manual verification for every company
- Evidence source for each major claim
- Weekly random sampling review
- Removal of:
 - Service firms
 - PE-owned firms
 - Inactive companies
 - Wrong-fit companies

Key Success Metrics

The project would be considered successful if:

- 1000 companies qualify on major ICP criteria
- Majority show visible growth signals
- Duplicate entries are minimized
- All insights remain evidence-backed
- Final list is outreach-ready

Core Focus

The proposal prioritizes:

- Quality over quantity
 - Evidence over assumptions
 - Real companies over bulk data
 - Structured qualification over generic sourcing
-
